

BUILDING SERVICES

LUBRON

WATER TECHNOLOGIES

As a European leader in water treatment, we partner with architects, engineers, facilities managers and contractors to provide an appropriate combination of advanced water treatment products, technologies and engineering support for the building services sector.

Water efficient buildings require the smart specification and configuration of water treatment technologies and products. Our specialist approach will also identify potential areas of water efficiency, including the use of alternative supplies such as boreholes, rainwater and grey water. Whether you are a developer, a facilities manager or a selfbuilder, Lubron can add value to your project.

BUILDING SERVICES

From water sources to heating and cooling systems, efficient water treatment improves the sustainability and running costs of any building. Lubron will identify opportunities for optimum performance at maximum efficiency with solutions that will stand the test of time. From a listed historic building to a state of the art new development, Lubron can design, manufacture and maintain the perfect solution.

VIRUS AND BACTERIA CONTROL

Air humidification systems and equipment, water tanks and systems, and washroom facilities represent potential sources of transmission of viruses and bacteria, including legionella. Lubron's water hygiene solutions will maintain compliance with the relevant regulations and mitigate your risk.

RESOURCE EFFICIENCY

Whether it is softened water reducing lime scale deposits, thus extending equipment life and reducing cleaning expenditure, or properly maintained equipment minimising downtime as a result of breakdowns, Lubron's turnkey solutions will impact positively on the resources and operational management of a building.
